

## Information about the AVYSL Lockboxes

Some Lockboxes can be difficult to open . . .

The lock is located in the front left hand side of the box (see where this lockbox is painted “Lock” with an arrow).

Please make sure you are **not** trying to unlock the chain that locks the lockbox to the gate. Many of these are spray painted red but not all of them.

Key in the code, push in and the lock will “pop”. It will not come out of the lockbox and may seem like it is still locked. The lid to the lockbox should now open. When closing and locking the lockbox, please make sure that you change the numbers on the lock and the push in until you hear the lock catch. You should no longer be able to lift the lid to the lockbox.
